## We can't afford to wait.

Plan = Reduce CO2 emissions by 6% every year and reforest 100 Gigatons of carbon.

WE MUST START NOW. 3°C (5.4°F) increase in temperature = 21-52% of species extinct CO2 (ppm) KEY = we start today! If we wait to start... = until 2020 = until 2030 If we wait until = until 2060 2020, If we wait until we commit all life 2030, If we wait until on earth to 300 we commit all life 2060, years of dangerous 500 If we start **NOW**, on earth to 500 we lose it all. conditions. we're locked in to years of mass extinctions. 1.5°-plus warming, but we protect our children's future. We can get back to 350 450 by the end of this CO2 may never get back to 350 ppm century if we START TODAY! 400 -CO2 in 2013 1850 Dangerous climate lasts hundreds of years longer We get back to 350 ppm around 2300 "Safe Level" We get back to 350 ppm around 2100
